Description		
<p>This issue was initially posted in github. (At that time I did not know this site yet) https://github.com/soerenb/extplorer/issues/15</p> <p>On some rare occasions - we don't know why - function chdir passes the constant 'ext_root' for the root directory instead of an empty variable. This constant is then not recognized and chdir does not take place.</p> <p>A workaround is available by changing line 76 in the file scripts/functions.js.php</p> <p>original:</p> <pre>if(dirs[0] == '') { dirs.shift(); }</pre> <p>modified:</p> <pre>if(dirs[0] == '' dirs[0] == 'ext_root') { dirs.shift(); }</pre> <p>Hope this helps!</p> <p>Best regards, Michael S. (Team-Infrastructure)</p>
