eXtplorer Version:	2.1.4	Joomla! Version:	none

Description

The main screen shows in root directory shows only "Loading...". But the left side of the screen shows all directorys.

I can switch to all sub-directories under the root directory and see their content.

This is a stand-alone installation without joomla.

History

- Status changed from Neu to In Bearbeitung

Maybe the directory permissions of the root directory don't allow access for the webserver user on your server?
Please check if that's ok.

#2 - 03/02/2015 11:00 AM - Alex H.

- File filelist_obfuscated.txt added

- File phpfm_obfuscated_dir-list.png added

Already checked this. Even made the user directory system wide readable. Doesn't helped me.

I attach the directory listing of that root directory. Some names had to be obfuscated, but I used placeholders.

Another filemanager called phpfm can list the root directory.

Maybe you have any idea, why the root http directory is not show and I only see the requester "Loading ...".

This is a hosted site and I don't have root access.

Thanks a lot for your help,
Alex
