

eXtplorer - PHP-based File Manager - Fehler #185

Blank Screen in FTP Authentication Mode Using extplorer As Standalone

04/10/2015 05:09 AM - OwN 3m-All

Status:	Neu		
Priority:	Normal		
Assignee:			
Category:			
Target version:			
eXtplorer Version:	2.1.4	Joomla! Version:	none
Description			
<p>I get a blank screen (except for the header) after logging in successfully in extplorer using only FTP authentication in stand-alone mode.</p> <p>This appears to only happen on newer operating systems. I get a blank screen in Ubuntu 14.04 with my web server software setup exactly as it is in Ubuntu 12.04.</p> <p>In Ubuntu 12.04, extplorer using FTP authentication works, and I am able to upload & modify files.</p> <p>In Ubuntu 14.04, extplorer successfully logs in using FTP authentication, but then I get a blank screen (except for the header) without being able to interact with any of my files.</p> <p>Attached is my config and a screenshot. The latest extplorer is unusable using FTP authentication as stand-alone software on Ubuntu 14.04.</p>

Which PHP versions are you using?

Have you tried the workaround I described in <http://extplorer.net/issues/121>

#2 - 01/23/2018 08:16 PM - Alan Milinovic

Same issue on my side.

#3 - 01/27/2018 09:39 AM - C haoz

Which PHP versions are you using?

Does the workaround in <http://extplorer.net/issues/121> work for you?
