<b>Target version:</b>	2.1.0	
<b>eXtplorer Version:</b>		<b>Joomla! Version:</b>
<b>Description</b>		
<p>Hello,</p> <p>Just did a clean install of Joomla 1.7. Uploaded ALL joomla files via FTP and installed with FTP (if this makes a difference). Installed several components just fine including ose File Manager, then installed latest version 2.1.0RC4. but the component does not load like it should. I the following warning:</p> <p>Warning: include() [function.include]: Failed opening '/home/***/public_html/administrator/components/com_extplorer/scripts/application.js.php' for inclusion (include_path='.:usr/lib/php:usr/local/lib/php') in /home/***/public_html/administrator/components/com_extplorer/include/list.php on line 385</p> <p>If I switch to FTP mode, I get the same warning, but also a notice:</p> <p>Notice: Undefined variable: authentication_type in /home/***/public_html/administrator/components/com_extplorer/include/login.php on line 57</p> <p>Any help would be appreciated. Extplorer has been a great component in the past.</p>
