eXtplorer - PHP-based File Manager - Fehler #328

BUG/ISSUE: You cannot always see where you are and move to the previous directory

10/19/2016 09:14 AM - Anonymous

Status: Neu

Assignee: Sören Eberhardt-Biermann

Normal

Category: Bug
Target version: 2.2.0

eXtplorer Version: 2.1.4 Joomla! Version: none

Description

Priority:

When you are into Explorer you can see on the top there are two green arrow but is now working. If you navigate in a folder you don't see where you are, also you cannot go back to the previous folder.

I use eXplorer in Webuzo panel as is the integrated File Manager but all time I have this issue. I navigate into the folder and for go back I need go to the first folder and cannot go just back to one folder.

Also will be good show always on top where you are. For see where I am I have to press many time refresh icon and wait the patch where I am is showed before use the File Manager.

Please fix this two issue:

- First: Is not possible to go back of one or more folder (one by one) Previous button.
- Second: Is not showed by default where you are in the navigation.
