## **Description**

I'm using joomla 2.5 with dyndns.org (dynamic ip provider). The server is running on higher ports then the basic (443, 80, 8080) since the internet provider is blocking this.

When i now start extplorer in joomla backend, i get the joomlamenu (top) and the footer of extplorer. But for the rest, the browser is keeping on refreshing.

Any idea what i can do?
