<b>Description</b>		
<p>Hi,</p> <p>I would suggest that you make it clear on the download page which version of Extplorer is for which version of Joomla.</p> <p>I recently tried to load 2.1.1 into joomla and it failed to load. However it did set up a directory and some files so that when I tried to upload the correct version I got an error message saying the directory was already being used by another component.</p> <p>I have had to ask my service provider to delete the directory and hopefully once they have done that everything will work OK.</p> <p>Maybe the first thing the software installer should do is delete any existing installation - if this is possible.</p> <p>btw I think this component is fantastic and I'd like to thank you for all your work.</p> <p>Paul</p>		

### History
